2006 FLHTCUSE “CVO” Heated Seat

The seat on the 2006 FLHTCUSE is plugged into connector #191B; this connector is located near the accessory connector #4A which has a rubber plug in the connector. Make sure the seat is plugged into the correct connector, if it is not you would need to turn on the accessory switch to operate the seat. The picture below shows the 2 connectors.

2006 FLHTCUSE “CVO” Owners Manual Correction

On pages 54-55 it states that the Accessory Rocker Switch needs to be turned on to operate the heated seat and the heated handgrips, which is incorrect. The Accessory Rocker Switch does not control the heated seat or the heated grips.
